

CERTIFICATE OF ANALYSIS

BASELINE Sulfuric Acid

1A

PRODUCT NUMBER: 03

LOT NUMBER : 3201010

ASSAY : 94%

PRODUCT NUMBER: 03				LOT NUMBER : 3201010				ASSAY : 94%									
2A				Most elements are determined by ICP-MS using sample preconcentration. The results are the average of three aliquots subsampled from three 500mL samples representative of the lot. The samples are slowly evaporated to dryness, and the residue reconstituted in a small volume of 2% Seastar <i>BASELINE</i> Nitric Acid. Operations are conducted under Class 100 or better clean-room conditions. Elements that suffer from isobaric interference(s) are analyzed by GFAAS (indicated by a +). For volatile elements (indicated by *), the acid samples are diluted then directly injected into the ICP-MS. For all of the analyses, values below 3 times the standard deviation of the blank are given as <, and no blank value is subtracted. 3B 4B 5B 6B 7B 8 1B 2B								3A	4A	5A	6A	7A
